

Customer—Large maker of arcade games

Use Case--A basic, ATX white box computer system with a high-end graphics card and 4 USB ports

Requirement—an embedded computer systems that would be integrated into a coin operated arcade game cabinet

- Flexible production and delivery schedule based on their demand rather than enforcing a strict MOQ
- Flexible financial terms
- Unique software revision control requirements
- Unique process control requirements during manufacture and test

Solution:

- An off the shelf PC system that was configured to meet the specific technology and financial requirements of the application
- Extended stocking timeframes for legacy spares and components to extend serviceability to avoid costly software redevelopment
- Strict maintenance of existing form factor over 16 years of products to reduce the need to redesign and retrofit existing units
